

TANK CARE™ a complete above ground storage tank maintenance and inspection program.

Why take tanks out of service and open them needlessly?

Why clean a good tank?

Why not focus inspection and repairs on tanks which are in most need of it?

The answer to these questions is TANK CARE®; a new inspection and maintenance program utilized by MISTRAS Services, a member of MISTRAS Group, Inc.

The key to TANK CARE® is the Acoustic Emission Tank Condition Assessment also known as TANKPAC™. This test allows MISTRAS Services to determine which tanks have the highest degree of active corrosion. With this information, the tanks can then be graded in terms of the most severe or damaged. These tanks can then be opened and inspected first. In this way, the inspection and repair budgets are directed to tanks that need it the most.

Once a tank is open, TANK CARE® also features:

- MFE floor scanning to detect and locate where potential problems exist
- Ultrasonic flaw sizing determines the boundaries of the defects detected by the MFE scan
- Additional visual, magnetic particles, vacuum box and ultrasonic thickness measurements for API 653 certification.

TANK CARE™ Features:

- Acoustic Emission non-intrusive tank condition assessment (TANKPAC™)
- MFE floor scan mapping
- Ultrasonic flaw sizing
- API 653 certification
