[15] Description of Product

The equipment consists of a series of ISPKxxI, ISPKxxUC and ISPKxxIUC sensors with a 1281 or 1281-LP barrier/preamp interface. The barrier interface supplies the sensors and pre-amps with an intrinsically safe signal. The Barrier/Preamp Interface also detects an AST signal from the standard AE system and sends it to the preamplifier/sensors where the sensors will generate tone bursts to send back to the AE system thru the barrier. The pre-amplifier can be integrated into the sensors or installed as a separate unit for high temperature applications
